

GENETIC CERTIFICATE

Mr Alexandr TARASOV
Ul Basseinaya 53-353

196132 Saint Petersburg
Russia

Name : **Rus Neva-Da Ogastus**

Breed : **American Staffordshire Terrier**

Identification Nu : **941 000 003 197 986**
Pedigree Nu : **NE816-1213/2010**

Sex : **Male**
Date of birth : **06/01/10**

Sampler : **Veterinarian**
Dr Svetlana PUSKAREVA
(Svetogorsk, 188990, Russia)
Sampler nu. :

Sampling date : 02/09/10
Sampling type : Cheek swab
Sample Nu : **218903**
Receipt date : 28/10/10
Case : 54339 / 16964 / 201005566 - 28/10/10
Reference : 31425 / 22530 / 52297
Test : 67237/ 47955
Result code : 44208

Cerebellar Ataxia

Result : **Normal homozygous**

Tested disease : **Cerebellar Ataxia**

Interpretation : The animal has 2 normal copies of the gene implied in the Amstaff cerebellar ataxia. The animal will not develop the cerebellar ataxia. The animal will not transmit the genetic anomaly to its progeny.

Result date : 03/11/10

Lina MUSELET
Engineer in genetics

Explanations :

This test is specific to the cerebellar ataxia in American Staffordshire Terrier (Amstaff), also named cerebellar cortical degeneration or neuronal ceroid lipofuscinosis (NCL). This neurological disorder is inherited as an autosomal recessive trait. This test relies on the detection of the normal form of the gene implied in the Amstaff cerebellar ataxia and the only defective form known up to date. The technology underlying this test is patented world-wide by INRA and ENVA. ANTAGENE has a exclusive international license to provide this test. This one can not be used to detect other forms of ataxia, nor other forms of inherited neurological diseases, nor other neurological ailments acquired during the life span of the animal.
